Tel: (86) 177 2351 9127 | E-mail: fanzj0523@bupt.edu.cn

Education

B.Eng in Telecommunication Engineering and Management

Beijing University of Posts and Telecommunications (BUPT) | Queen Mary University of London (2023–2027 Expected)

- GPA: 3.28/4.0
- Main courses: Electronic and Circuit Foundation, Machine Learning and Data Analysis, Data Structures, Signals and Systems Theory, Digital Circuit Design, Digital Signal Processing, etc.

Project Experience

Substrate Level Failure Prediction Based on Deep Learning Method (2025)

Faculty of Science | Hong Kong University

- Use neural network to predict die failure in the semiconductor manufacturing process, helping improve production efficiency.
- Enhance model generalization ability to be applicable to wafers of different specifications.

Student Information Managing and Personal Planning System (2025)

International School | BUPT

The platform has now been launched and promoted within the school, attracting over 2,000 users and achieving a data flywheel loop, with continuous iterations:

- Built a Transformer-based framework on student data to model long-term learning and career trajectories, improving the accuracy of career prediction and recommendation.
- Designed and deployed database, relay, and authentication servers using a light backend architecture to ensure cross-network stability, seamless system integration, and scalability, while contributing to core data analysis algorithm design.

Large Language Model & Generative AI Summer Camp (2024)

OxCam Programme | University of Cambridge

- Three weeks of course learning and interdisciplinary research under the supervision of Prof. Pietro Liò.
- Focus on hand pose estimation and the application in sign language recognition.
- Produced a final presentation titled "Self-Supervised Hand Pose Estimation and Recognition" with a distinction grade.

QMUL WinterHack Challenge (2026)

Innovation Center | Queen Mary University of London

- Developed a ROS2-based robotic arm vehicle on Raspberry Pi, focusing on software and algorithm design; implemented SLAM for localization and mapping, A* for path planning.
- Enabled autonomous navigation and object grasping through integrated perception and control.

Platform for Dispatching and Accepting O2O Delivery Tasks (2023)

- Backend services development. Design the user interaction logic.
- Frontend-backend API integration.

Extracurricular experience

National College Students' Competition on Network and Information Technology (2024)

Team Leader | Third Prize

-
- Integrating quick command applications for large models based on HarmonyOS.
 - Proposed a new interaction mode for mobile devices

Skills and interests

- **Language Skill:** English(CET-4:550,CET-6:443,IELTS 6.0), Chinese(native).
- **Proficient in:** Python, Pytorch, C
- **Interests:** AI4S, Agentic
